Bipolar military ICs:

We still make 'em like they used to.

When you must have older bipolar military ICs, remember Lansdale: we serve the semiconductor aftermarket. Our products are those that others no longer make, assuring you that you'll always have a source.

You'll see many old friends on our product list. Like Raytheon's DTL 200 Series, Signetics DTL and TTL. Motorola's SUHL-TTL and others. And we can meet all your needs, even to the most exacting military standards.

We also do custom manufacturing, including Schottky TTL, linear and digital. And we can give you gold-doping where needed.

So don't go to the expense of designing-in a new part. Not when we still make 'em.

Exactly like they used to.

EDITORIAL POLICY AND PROCEDURES

PURPOSE

This D.A.T.A.BOOK is designed to report comprehensively on what is presently being produced throughout the world in the field of Logic Computational ICs. While a publication such as this cannot provide 100% of the information you might need, its primary aim is that of facilitating the selection of types suitable to your technical requirements, and of directing you to the sources of their manufacture.

TECHNICAL DATA ACQUISITION

D.A.T.A. acquires and processes the information presented in this D.A.T.A.BOOK with the cooperation of the participating manufacturers who supply us with their latest technical information. Manufacturers are not charged for the listing of their products.

SUBSTITUTE TYPES AND COMPATIBILITY

While this D.A.T.A.BOOK does not claim to be an interchangeability guide, Logic and Computational ICs with the same or similar characteristics are grouped together, thereby enabling the user to identify candidate alternate sources. The final authority for a replacement or alternate source is the manufacturer's catalog or datasheet.

PRICE AND AVAILABILITY

Because of the rapidly changing and complex nature of this field, current price and delivery information should be obtained directly from the manufacturers. The Manufacturers' Profile and Sales Office Listings in the back of the book will assist you.

MANUFACTURERS' SPECIFICATIONS

This book includes currently manufactured devices and devices soon-to-be available with their major characteristics, drawings and manufacturers. Every effort is made to ensure the accuracy of the entries herein; however, the publisher cannot be held responsible nor guarantee against the possibility of error or omission. Only the manufacturers or their authorized representatives can provide you with complete technical details.

GSA APPROVED

D.A.T.A.BOOKS are authorized for purchase under GSA Contract #GS-01F-09833 FSS 76 Part 1 Publications. Write or call for GSA prices.

THREE BASIC WAYS:

	If you know:	And need to know:	Read:
1	Electrical & mechanical Requirements	A type number (Maufacturers' part number)	Explanation 1
2	A type number	The electrical and/or mechanical characteristics or its circuit and outline configuration or who manufactures it or an equivalent type	Explanation 2
3	A Generic device number or Functional Equivalent Device number or circuit drawing number	The manufacturer or the type number or product class or equivalent types or electrical and/or mechanical characteristics	Explanation 3

EXPLANATION 1

If you know:
The electrical and mechanical requirements
And need to know:
A suitable type number:
First: Turn to the TABLE OF CONTENTS

a. Select from the Table of Contents the Technical Section corresponding to the known device type.
EXAMPLE: Technical Section 5

TABLE OF CONTENTS **Page**

4. FLIP-FLOPS
D-Type 48
JK-Type 61
RS-Type 75
RST-Type 75
T-Type 76
5. GATES
AND 77
AND-OR 85
AND-OR-INVERT 86
Exclusive NOR 92

EXPLANATION 2

If you know:
The type number
And need to know:
The electrical characteristics:
First:
Turn to the TYPE NUMBER CROSS INDEX and find your type number.

a. Note the page and line number beside your Type. EXAMPLE: **87-8**

3. TYPE No. CROSS INDEX

EXPLANATION 3

If you know:

A generic or functional equivalent device number or circuit drawing number

And need to know:

Available manufacturers, type numbers, product class, or electrical and/or mechanical characteristics

First:

Simply turn to the "Generic Index" or the "Functional Equivalence Index."

Locate the generic or functional number

✪ SYMBOLS AND CODES AT TOP OF FIRST INTERPRETER PAGE

INTERPRETER (Also See Symbols & Codes)

SYMBOLS: Symbols such as #,△, and $ are used in all columns, numeric or otherwise, whenever the data entries differ in some way from the entity defined in the column heading. For instance, if a given heading specifies Max. Power (in Watts) and the numeric value being entered for a given type represents the minimum power instead, the variance is denoted by the appearance of a special symbol alongside the numeric entry.

CODES: Codes are used in some columns as means to abbreviate the data being entered. The codes may be alphabetic (A,B,C, etc.) numeric (1,2,3 etc.) or some combination of both.

POWERS-OF-TEN MULTIPLIERS

The powers-of-ten multipliers shown below are used in numeric columns when the value being entered is many times greater or smaller than the units of measure indicated in the column heading. Usually, the latter are the so-called 'basic' units; such as V (volts), A (amperes) and s (seconds). The multipliers and an explanation of their use are given below:

EXPLANATION

Value of Data To Be Entered	Basic Unit In Column Heading	Actual Entry
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	9.0M
0.5 volt	V (volts)	500m*
10 amperes	A (amperes)	10

*May also be written as 0.5 with no multiplier

MULTIPLIERS

Power	Prefix	Symbol
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f
10^{-18}	atto	a

SEQUENCING PARAMETERS

The arrangement of types in the technical sections is keyed to a set of special characteristics selected for their importance from among the general group of characteristics tabulated in each section. These selected characteristics or sequencing parameters differ from one section to another, and are identified at the top of each page as shown in the sample below.

The different types within a section are first arranged in ascending numeric (or alphabetic) order of the first such parameters. Groups of types having a common value for the first parameter are then arranged in ascending order of the second parameter. This process continues for each parameter in turn, up to and including the last parameter which, in every instance, is the type number itself. The final arrangement, by type number, is done in accordance with the sequencing of type numbers in the cross-index. The absence of an entry for any sequencing parameter is regarded as a zero and precedes any actual entries in the sequencing.

MAJOR CHARACTERISTICS — **SEQUENCING PARAMETERS**

USING THE FUNCTIONAL EQUIVALENCE INDEX

As an aid to the design, component, repair, maintenance and purchasing professional who spends a good portion of his time looking for ICs, D.A.T.A., Inc. has developed the concept of Functional Equivalence as an aid to locating possible alternate sources.

What is a Functionally Equivalent Device?

D.A.T.A., Inc. defines an IC to be functionally equivalent to another IC if both devices exhibit identical pinouts and logic diagrams. Devices found to be functionally equivalent are assigned identical Functional Equivalent (FEMI) Numbers which are used to enable an electronic search for an alternate source. Functional Equivalence Numbers take two forms. Those that are completely numeric (ex: 54-107) indicate functional equivalence was determined by analysis of the representative device logic diagrams only. A functional equivalence number with a capital letter at the end (ex: 54-107N) indicates functional equivalence was first determined by analysis of the representative device logic diagrams AND confirmed by an independent testing laboratory.

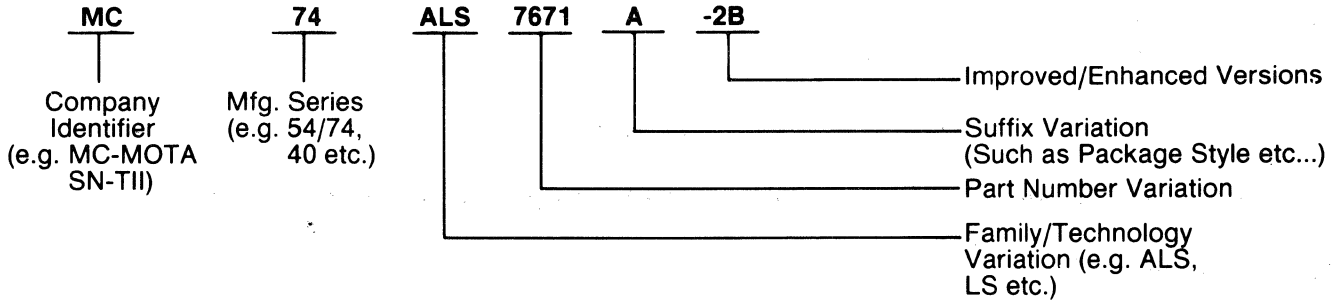
It is important to note that functional equivalence indicates pin for pin compatibility by function, but not necessarily by technology, or even less apparent subtleties such as power needs, timing diagrams, package dimensions, materials, and/or dissipation factors.

Upon identification of a specific functionally equivalent part number, which you believe will be of proper form, fit and function, it is recommended that you obtain the most recent datasheet directly from the manufacturer before making a final decision on the device.

The Type to Functional Number Equivalence Section provides the Functional Equivalence Number if the type number is known. The Functional Equivalence Number also corresponds to a drawing number which allows easy cross-reference between the Functional Equivalence Index and the drawings.

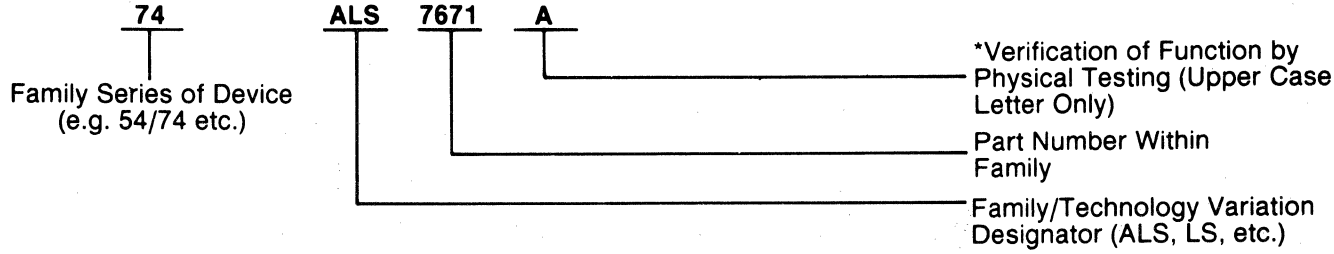
Most manufacturers use a numbering scheme as follows:

EXAMPLE: Manufacturer's type number: **MC74ALS7671A-2B**



The numbering scheme for a Functional Equivalence Number follows as closely as possible to industry practices. It is configured as follows:

EXAMPLE: Functional Equivalent Number: **74ALS7671A**



*A letter suffix indicates a verification of function by physical testing. Functional Numbers with a suffix letter have been tested for Pin-for-Pin compatibility by an independent testing facility.

DREI GRUNDSÄTZLICHE MÖGLICHKEITEN:

	Wenn Sie schon wissen:	Und Sie möchten wissen:	Lesen Sie:
1	Die elektrischen und mechanischen Anforderungen	Eine Typennummer (Bestandteil Nummer des Herstellers)	Erklärung 1
2	Eine Typennummer	Die elektrischen und/oder mechanischen Merkmale oder die Schaltkreis Zusammenstellung und Außenabmessungen oder den Hersteller oder eine Äquivalenztype	Erklärung 2
3	Eine Bauteilgattungsnummer oder eine Nummer eines funktionell gleichwertigen Bauteiles oder die Nummer des Schaltschemas	Den Hersteller oder die Typennummer oder Produktklasse oder eine Äquivalenztype oder die elektrischen und/oder mechanischen Merkmale	Erklärung 3

ERKLÄRUNG 1

Wenn Sie schon wissen:

e. Finden Sie den Hersteller-Code und -Namen. BEISPIEL: **FCAJ**

MANUFACTURERS' CODES & NAMES

The manufacturers listed below are in order of D.A.T.A. Mfrs.' Code and reference the company name. Additional Manufacturers Profile information, sorted by company name, can be obtained on page 595.

D.A.T.A. MFRS.' CODE	MANUFACTURER
AMD	Advanced Micro Devices, Inc.
AMR	American Microsemiconductor
ANA	Analog Devices, Inc.
BELI	Bharat Electronics Ltd.
CCL	★ Cal Crystal Labs, Inc.
DDC	ILC Data Device Corp.
DIS	Discon Industries, Inc.
DTL	G.E. Datel
EXR	Exar Corp.
FCAJ	Fujitsu Limited
FERB	Ferranti Electronics Ltd.
NSC	National Semiconductor
OKIJ	OKI Electric Industry Co., Ltd.
PHIN	* Philips Electronic Components & Material Div.
PLSB	* Plessey Semiconductors
PUL	★ Pulse Engineering Products
RCA	RCA Corporation
RSCB	★ R. S. Components Ltd.
RTCF	* RTC-Compelec
RTN	Raytheon Company
SEP	Semi Processes Inc.
SGSI	SGS-ATES Componenti Ellectronici S.p.A.

ERKLÄRUNG 2

Wenn Sie schon wissen:
Die Typennummer

Und Sie möchten wissen:
Die elektrischen Merkmale

Erstens:
Fahren Sie fort mit TYPE NUMBER CROSS INDEX und finden Sie dort Ihre Typennummer.

a. Merken Sie sich die Seitenzahl und Zeilennummer neben Ihrer Type. BEISPIEL: **87-8**

✪ SYMBOLS AND CODES AT TOP OF FIRST INTERPRETER PAGE

ERLÄUTERUNGEN (siehe auch Symbole & Codes)

SYMBOLE: Symbole wie #, ▲, und $ werden in allen Kolonnen verwendet, wenn immer sich die Eintragungen in irgendeiner Weise von den in den Kolonnentiteln definierten unterscheiden, gleichgültig ob diese von numerischer oder anderer Natur sind. Zum Beispiel, ist der gegebene Titel definiert als "Max. Power (in Watts)" und der eingetragene numerische Wert repräsentiert aber die Minimalleistung, so wird diese Abweichung durch ein spezielles Symbol neben der numerischen Eintragung gekennzeichnet.

CODES: Codes werden in manchen Kolonnen benutzt um eingetragene Daten abzukürzen. Diese Codes können alphabetischer (A, B, C etc.), numerischer (1, 2, 3 etc.) Natur oder auch eine Kombination aus beiden sein.

MULTIPLIKATIONSFAKTOREN FÜR ZEHNERPOTENZEN

Die Multiplikationsfaktoren für Zehnerpotenzen, die im Folgenden angeführt sind, werden dann in numerischen Kolonnen gebraucht wenn der eingetragene Wert viele Male größer oder kleiner ist als die Maßeinheit welche im Kolonnentitel angegeben ist. Diese sind normalerweise die sogenannten Grundeinheiten wie V (Volt), A (Ampere) und s (Sekunden). Die Multiplikationsfaktoren und eine Erklärung für ihren Gebrauch sind wie folgt:

ERKLÄRUNG

Einzutragender Zahlenwert	Grundeinheit im Kolonnentitel	Tatsächliche Eintragung
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	9.0M
0.5 volt	V (volts)	500m *
10 amperes	A (amperes)	10

*Kann auch mit 0.5 ohne Multiplikator angegeben sein.

MULTIPLIKATOREN

Zehnerpotenz	Präfix	Symbol
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f
10^{-18}	atto	a

SEQUENZ-BESTIMMENDE PARAMETER

Die Reihenfolge der angeführten Typen in den technischen Abschnitten ist durch eine Gruppe von speziellen Merkmalen bestimmt, welche nach ihrer Wichtigkeit unter den angegebenen allgemeinen Merkmalen eines Abschnittes ausgewählt wurden. Diese gewählten Merkmale oder Sequenz-Parameter unterscheiden sich von einem Abschnitt zum anderen und sind am Kopf jeder Seite, wie das Beispiel unten zeigt, identifiziert.

Die verschiedenen Typen innerhalb eines Abschnittes sind zuerst in steigender numerischer (oder alphabetischer) Reihenfolge des ersten Parameters angeordnet. Jene Gruppe von Typen, welche einen gemeinsamen Wert für den ersten Parameter aufweist, ist in steigender Reihenfolge des zweiten Parameters angeführt. Dieser Prozess setzt sich für jeden einzelnen Parameter der Reihe nach fort bis einschließlich des letzten welcher dann in jedem Fall die Typennummer selbst ist. Die endgültige Anordnung nach Typennummern ist in Übereinstimmung mit der im "Cross Index" verwandten Reihenfolge. Das Fehlen einer Eintragung für einen Sequenz-Parameter wird als Null gewertet und wird deshalb allen anderen tatsächlichen Eintragungen in der Reihenfolge vorangestellt.

TRES MODOS BASICOS:

	Si conoce:	Y necesita saber:	Lea:
1	Los requerimientos eléctricos y mecánicos	Un número de tipo (Número de parte del fabricante)	Explicación 1
2	Un número de tipo	Las características eléctricas y/o mecánicas o su circuito y configuración de trazo o el fabricante o un tipo equivalente	Explicación 2
3	Un número genérico de la parte o un número funcional equivalente de la parte o un número del esquema del circuito	El fabricante o el número de tipo o la clase del producto o los tipos equivalentes o las características eléctricas y/o mecánicas	Explicación 3

EXPLICACION 1

Si conoce:
Los requerimientos eléctricos y mecánicos
Y necesita saber:
Un número de tipo adecuado
Primero:
Refiérase a la Sección TABLE OF CONTENTS

a. Seleccione del Contenido la Sección Técnica correspondiente al tipo conocido de la parte. EJEMPLO: Sección Técnica 5

4. FLIP-FLOPS
D-Type 48
JK-Type 61
RS-Type 75
RST-Type 75
T-Type 76
5. GATES
AND 77
AND-OR 85
AND-OR-INVERT 86
Exclusive NOR 92

b. Refiérase a esa Sección. Localice el número de tipo que concuerde en general con sus requerimientos. EJEMPLO: **MB411M**

Debido al orden en secuencia, los tipos similares aparecerán juntos.

Nótense los parámetros secuenciales en la esquina superior derecha de cada página.

5. GATES

IN ORDER OF: (1) TYPE (2) INPUTS PER CKT (3) CKTS PER PKG (4) tpd MAX & (5) TYPE NO.

d. Refiérase a la Sección MANUFACTURERS' CODES & NAMES.

e. Localice el código y nombre del fabricante. EJEMPLO: **FCAJ**

MANUFACTURERS' CODES & NAMES

The manufacturers listed below are in order of D.A.T.A. Mfrs.' Code and reference the company name. Additional Manufacturers Profile information, sorted by company name, can be obtained on page 595.

D.A.T.A. MFRS.' CODE	MANUFACTURER
AMD	Advanced Micro Devices, Inc.
AMR	American Microsemiconductor
ANA	Analog Devices, Inc.
BELI	Bharat Electronics Ltd.
CCL	★ Cal Crystal Labs, Inc.
DDC	ILC Data Device Corp.
DIS	Discon Industries, Inc.
DTL	G.E. Datel
EXR	Exar Corp.
FCAJ	Fujitsu Limited
FERB	Ferranti Electronics Ltd.
NSC	National Semiconductor
OKIJ	OKI Electric Industry Co., Ltd.
PHIN	* Philips Electronic Components & Material Div.
PLSB	* Plessey Semiconductors
PUL	★ Pulse Engineering Products
RCA	RCA Corporation
RSCB	★ R. S. Components Ltd.
RTCF	* RTC-Compelec
RTN	Raytheon Company
SEP	Semi Processes Inc.
SGSI	SGS-ATES Componenti Ellectronici S.p.A.

EXPLICACION 2

Si conoce:
El número de tipo
Y necesita saber:
Las características eléctricas
Primero:
Refiérase a la sección TYPE NUMBER CROSS INDEX y encuentre su número de tipo.

a. Note el número de página y línea al lado de su tipo. EJEMPLO: **87-8**

3. TYPE No. CROSS INDEX

EXPLICACION 3

Si conoce:
Un número genérico o funcional equivalente de parte, o un número del dibujo del circuito

Y necesita saber:
Quiénes son los fabricantes disponibles, números de tipo, clase del producto o características eléctricas y/o mecánicas

Primero:
Simplemente refierase a la seccion "Generic Index" o "Functional Equivalence Index."
Localice el numero generico o el numero funcional.

FUNCTIONAL EQUIVALENCE INDEX

Note el número de tipo del fabricante, código y clase del producto, y las últimas columnas le darán los números de página y línea para complementar detalles.

NOTA – Los símbolos y códigos utilizados en estas secciones técnicas se explican en las páginas "Interpreter" al final del libro.

DEFINICION DE TERMINOS
INTERPRETACION Y DEFINICIONES

Esta sección define los encabezamientos de las columnas y los símbolos que aparecen en las Secciones Técnicas de este libro.

SECTION 17 MAGNITUDE COMPARATORS SECTION 17

17. MAGNITUDE COMPARATORS

A - Address Comparator
I - Identity Comparator
M - Magnitude Comparator
U - Comparator as coded above has Unified Bus application

✪ SYMBOLS AND CODES AT TOP OF FIRST INTERPRETER PAGE

INTERPRETADOR (Véanse también Símbolos y Códigos)

SIMBOLOS: Símbolos tales como #, ▲, y $ se usan en todas las columnas, ya sean numéricas o de otro tipo, cuando las entradas de información difieren de algún modo de la entidad definida en el encabezamiento de la columna. Por ejemplo, si un encabezamiento dado especifica Max. Power (in Watts) y el valor numérico que se ha entrado para un tipo dado representa en cambio la potencia mínima, la variación se denota por medio de un símbolo especial al lado de la entrada numérica.

CODIGOS: Los códigos se usan en algunas columnas como medio para abreviar la información entrada. Los códigos pueden ser alfabéticos (A,B,C etc.) o numéricos (1,2,3 etc.) o una combinación de ambos.

MULTIPLICADORES DE POTENCIA DE DIEZ

Los multiplicadores de potencia de diez mostrados abajo se usan en las columnas numéricas cuando el valor que se entra es muchas veces más grande o pequeño que las unidades de medida indicadas en el encabezamiento de la columna. Usualmente, éstas últimas son las llamadas unidades básicas tales como V (voltios), A (amperios) y s (segundos). A continuación se dan los multiplicadores y una explicación de su uso:

EXPLICACION

Valor de la información a que se dará entrada	Unidad básica en el encabezamiento de la columna	Entrada efectiva
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	90M
0.5 volt	V (volts)	500m*
10 amperes	A (amperes)	10

*También puede ser escrito como 0.5 sin multiplicador

MULTIPLICADORES

Power	Prefix	Symbol
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f
10^{-18}	atto	a

PARAMETROS SECUENCIALES

El ordenamiento de los tipos en las secciones técnicas está asociado a un conjunto de características especiales seleccionadas por su importancia de entre el grupo general de características tabuladas en cada sección. Estas características seleccionadas o parámetros secuenciales difieren de una sección a otra, y se identifican en la parte superior de la página tal como se muestra en el ejemplo de abajo.

Los diferentes tipos dentro de una misma sección presentan inicialmente un orden numérico (o alfabético) ascendente desde el primero de tales parámetros. Los grupos de tipos que tienen un valor común para el primer parámetro son luego ordenados en orden ascendente desde el segundo parámetro. Este proceso continua para cada parámetro de turno, hasta el último parámetro inclusive, el cual es, en cada caso, el número de tipo en sí. El ordenamiento final, por el número de tipo, se hace de acuerdo con la secuencia de los números de tipo en el índice de referencia. La ausencia de una entrada para cualquier parámetro secuencial se considera como cero y precede cualquier entrada efectiva en la secuencia.

TROIS FACONS DE BASE:

	Si vous connaissez:	Et avez besoin de connaître:	Lisez:
1	Les caractéristiques électriques et mécaniques requises	La reference du produit (reference du fabricant)	Explication N° 1
2	La reference Du produit	Les caractéristiques mécaniques et/ou électriques ou son circuit et sa configuration d'encombrement ou le fabricant ou un modele equivalent	Explication N° 2
3	Une référence générique de système ou la référence d'un dispositif èquivalent ou la référence du schéma du circuit.	Le fabricant ou la reference du produit ou la classe du produit ou les modeles e quivalents ou les caractéristiques électriques et/ou mécaniques	Explication N° 3

EXPLICATION N° 1

Si vous connaissez:
Les caractéristiques électriques et mécaniques requises
Et avez besoin de connaître:
La référence du produit approprié.
Premièrement:
Reportez-vous a la page de TABLE OF CONTENTS

a. Recherchez dans la Table des Matières la section technique correspondante au type de systéme connu. EXEMPLE: Section technique 5.

4. FLIP-FLOPS
D-Type 48
JK-Type 61
RS-Type 75
RST-Type 75
T-Type 76
5. GATES
AND 77
AND-OR 85
AND-OR-INVERT 86
Exclusive NOR 92

b. Allez à la page de cette section. Trouvez la reference du produit qui correspond globalement à vos caractéristiques requises. EXEMPLE: **MB411M**

A cause du classement séquentiel des genres similaires apparaîtront ensemble.

Notez les paramètres de classement séquentiel dans le coin supérieur à droite de chaque page.

5. GATES

EXPLICATION N° 3

Si vous connaissez:
Une reference de systeme d'équivalence fonctionelle ou générique ou le numéro de schéma

Et avez besoin de connaître:
Les fabricants disponibles, les references du produit, la classe du produit, ou les caractéristiques mécaniques et/ou électriques

Premièrement:
Allez simplement a la page du "Generic Index" ou "Functional Equivalence Index."

Localisez la reference generique ou fonctionelle.

Notez la reference du produit du fabricant, le code et la classe du produit et les dernières colonnes vous donneront les numéros de page et de ligne pour y trouver des détails complets.

N.B.: Les symboles et les codes utilisés dans ces sections techniques sont expliqués dans les pages "Interpreter" à la fin du livre.

DEFINITION DES TERMES

INTERPRETATIONS ET DEFINITIONS

Cette section définit les têtes de colonnes et les symboles qui apparaissent dans les sections techniques du livre. Classées alphabétiquement selon la description du domaine d'applications, les "Column Definitions" interprètent les titres des domaines d'applications et indiquent l'usage de la section.

(5) _____

A - Address Comparator
I - Identity Comparator
M - Magnitude Comparator
U - Comparator as coded above has Unified Bus application

✪ SYMBOLS AND CODES AT TOP OF FIRST INTERPRETER PAGE

INTERPRETATIONS (Voir aussi: Symboles et Codes)

SYMBOLES: Les symboles tels que #, ▲, et $ sont utilisés dans toutes les colonnes, que ce soit de valeurs numériques ou autres, chaque fois que les entrées de données diffèrent d'une certaine façon de l'entité définie dans la tête de colonne. Par exemple, si une tête de colonne particulière spécifie "MAX Power (in Watts)" et que la valeur numérique inscrite pour un produit particulier correspond au lieu de cela à la puissance minimale, la variation est signalée par l'apparition d'un symbole spécial à côté de la valeur numérique.

CODES: Des codes sont utilisés dans certaines colonnes de façon à abréger les données qui sont entrées. Les codes peuvent être alphabétiques (A, B, C etc. . .) ou numériques (1, 2, 3 etc. . .) ou bien une combinaison des deux.

MULTIPLICATEURS POUR LES PUISSANCES DE DIX

Les multiplicateurs pour les puissances de dix indiqués ci-après sont utilisés dans les colonnes numériques quand la valeur à inscrire est beaucoup plus grande ou beaucoup plus petite que celle qui peut être inscrite selon l'unité de mesure indiquée dans la tête de colonne. Normalement cette dernière est ce que l'on appelle l'unité de base: telle que V (volts), A (ampères), s (secondes). La liste des multiplicateurs ainsi que l'explication de leur emploi sont données ci-après:

EXPLICATION

Valeurs des données à inscrire	Unité de base dans la tête de colonne.	Entrée inscrite
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	9.0M
0.5 volt	V (volts)	500m*
10 amperes	A (amperes)	10

*peut aussi être écrit ainsi: 0.5 sans multiplicateur

MULTIPLICATEURS

Puissance	Préfixe	Symbole
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f
10^{-18}	atto	a

PARAMETRES DE CLASSEMENT SEQUENTIEL

Le classement des produits dans les sections techniques est lié à un groupement de caractéristiques spéciales choisies selon leur importance parmi le groupe général de caractéristiques classifié dans chaque section. Ces caractéristiques choisies ou ces paramètres de classement séquentiel diffèrent d'une section à l'autre, et sont identifiés au début de chaque page comme indiqué dans l'exemple ci-après.

Les différents produits à l'intérieur d'une section sont d'abord classés selon un ordre numérique (ou alphabétique) croissant pour le premier des paramètres. Les groupes de produits ayant une valeur commune pour le premier paramètre sont alors classés selon un ordre croissant pour le deuxième paramètre. Ce procédé continue pour chaque paramètre successif jusqu'à et y compris le dernier paramètre qui dans chaque cas est lui-même la reference du produit. Le classement final, par reference du produit est fait selon le classement séquentiel des reference du produit dans la table des renvois. L'absence d'une entrée pour n'importe quel paramètre de classement séquentiel est considérée comme étant un zéro et précède toutes les entrées actuelles dans le classement séquentiel.

e．製造元のコードと名前を探し出します。**FCAJ**

MANUFACTURERS' CODES & NAMES

The manufacturers listed below are in order of D.A.T.A. Mfrs.' Code and reference the company name. Additional Manufacturers Profile information, sorted by company name, can be obtained on page 595.

D.A.T.A. MFRS.' CODE	MANUFACTURER
AMD	Advanced Micro Devices, Inc.
AMR	American Microsemiconductor
ANA	Analog Devices, Inc.
BELI	Bharat Electronics Ltd.
CCL	★ Cal Crystal Labs, Inc.
DDC	ILC Data Device Corp.
DIS	Discon Industries, Inc.
DTL	G.E. Datel
EXR	Exar Corp.
FCAJ	Fujitsu Limited
FERB	Ferranti Electronics Ltd.
NSC	National Semiconductor
OKIJ	OKI Electric Industry Co., Ltd.
PHIN	* Philips Electronic Components & Material Div.
PLSB	* Plessey Semiconductors
PUL	★ Pulse Engineering Products
RCA	RCA Corporation
RSCB	★ R. S. Components Ltd.
RTCF	* RTC-Compelec
RTN	Raytheon Company
SEP	Semi Processes Inc.
SGSI	SGS-ATES Componenti Ellectronici S.p.A.

説明 2

型式番号がわかっていて、
電気的特性を知りたいときは、まずTYPE NUMBER
CROSS INDEX のところを開き、型式番号を探し出します。

a．型式番号の横に書いてあるページ番号と行番号(例: **87-8**)を確認します。

3. TYPE No. CROSS INDEX

✪ SYMBOLS AND CODES AT TOP OF FIRST INTERPRETER PAGE

INTERPRETER（記号とコードの項参照）

記号(シンボル)：全ての欄にわたって、見出しで定義されているのとは何らかの形で異なる種類の情報が記載されているときに、数字と＃とか△とか$のような記号が使われています。例えば、ある欄の見出しにMax.Power(Watts単位)とあるのに、記入されている特定の型の数値が最小電力のときは、数字の横に付される特別の記号により示されます。

コード：いくつかの欄では記入されるデータを簡素化するためにコードが用いられています。コードはアルファベットの文字(A、B、Cなど)か、数字（1、2、3など)か、その組合わせにより構成されています。

10の累乗数

欄の見出しで指示されている単位をはるかに上回るか、下回るような値が記入されるときは、下記のような10の累乗数を用いて表記してあります。後者に属するものとしては、通常V(ボルト)、A(アンペア)、s(秒)などの、いわゆる基本的単位があげられます。乗数とその使い方は次のとおりです。

説明 記入するデータの値	欄の基本単位	実際の記入例
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	9.0M
0.5volt	V (volts)	500m*
10amperes	A (amperes)	10

＊ 乗数として0.5という形で記入されていることもあります。

乗数

累乗	接頭辞	記号
10^{12}	tera	T
10^{9}	giga	G
10^{6}	mega	M
10^{3}	kilo	k
10^{-3}	milli	m
10^{-6}	micro	μ
10^{-9}	nano	n
10^{-12}	pico	p
10^{-15}	femto	f
10^{-18}	atto	a

見出しパラメタ

各項目における型式の配列は、その項目で表の中の各々の特性の中から重要と思われる特性の順となっています。これらの重要な特性(見出しパラメタ)は、項目毎に異なりますが、下記の例におけるように、各ページの一番上に明記されています。各項目内の異なる型式は、まず最初のパラメタの数値の増す順、またはアルファアベット順に配列されています。最初の見出しパラメタが同一の場合は、二番目のパラメタの数値の増す順に配列されます。各パラメタについて、最後のパラメタまでこの要領で配列順を決めていきます。最後のパラメタは常に型式番号そのものに一致します。型式番号別の配列は、cross-indexの型式番号の順に従ってなされます。

見出しパラメタが記入されていない場合は、ゼロと見なされ、他の数値より前に置かれます。

D.A.T.A.BOOK®
COMPONENT LOCATOR

The Component Locator is designed to assist you in identifying which D.A.T.A.BOOK should be consulted to find information on a specific type of device.

Part 1:
Locator information for the Replacement and Alternate Source Series

At the top of the matrix, locate the type of component for which you need replacement information – then identify which book(s) in the Replacement and Alternate Source Series you should consult.

IC Generic Source Guide
Includes alternate source information on digital, interface, microprocessor, audio/video, linear and memory ICs. ICs are grouped and sorted by generic or root number as an aid in identifying possible alternate sources.

Diode Replacement & Alternate Source Guide
Includes direct and suggested replacement information on diodes, including optoelectronic and microwave types. The Direct Replacement section contains information on devices that have the same part number as the device to be replaced. The Suggested Replacement section contains information on replacement devices with a different part number than the device to be replaced.

Transistor Replacement & Alternate Source Guide
Includes direct and suggested replacement information on transistor, including optoelectronic and microwave types. The Direct Replacement section contains information on devices that have the same part number as the device to be replaced. The Suggested Replacement section contains information on replacement devices with a different part number than the device to be replaced.

Thyristor Replacement & Alternate Source Guide
Includes direct and suggested replacement information on thyristor, including optoelectronic and microwave types. The Direct Replacement section contains information on devices that have the same part number as the device to be replaced. The Suggested Replacement section contains information on replacement devices with a different part number than the device to be replaced.

IC Replacement & Alternate Source Guide
Includes direct and suggested replacement information on digital, interface, microprocessor, audio/video, linear and memory ICs. The Direct Replacement section contains information on devices that have the same part number as the device to be replaced. The Suggested Replacement section contains information on replacement devices with a different part number than the device to be replaced.

IC Functional Equivalence Guide
Identifies memory, digital, interface and linear IC devices that have been determined to be pin-for-pin functionally equivalent. Highlights those devices whose functional equivalence has been verified by an independent testing laboratory.

International Directory of ICs & Discrete Semiconductors (Formerly Master Type Locator)
Consolidated listing of ICs, discrete semiconductors, optoelectronic and microwave devices in current production. Identifies the function of each device, its manufacturers and where to locate additional information on each device.

International Directory of Discontinued ICs & Discrete Semiconductors
Consolidated listing of ICs, discrete semiconductors, optoelectronic and microwave devices that are discontinued – no longer in production. Identifies the function of each device, its manufacturers and where to locate additional information.

PART II: Locator information for the other D.A.T.A.BOOKS in the Electronic Information Series
At the left side of the matrix, locate the type of component for which you need detailed information such as design parameters, logic and outline drawings, names of manufacturers, etc. – then identify which D.A.T.A.BOOK you should consult.
